

SaaS moves so fast, security can't keep up. Except one — Dynamic SaaS Security by Reco.

Discovery

Instantly track all apps, SaaS-to-SaaS, Shadow SaaS, AI Agents, and Shadow AI tools, including their users, and data.

Identity & Access Governance

Ensure that accounts are always secure (e.g., with MFA), and access privileges are kept to a minimum.

SSPM+

Keep your posture and compliance airtight within business context, even as apps and AI Agents are added and updated.

Identity Threat Detection & Response (ITDR)

Get instant alerts on data theft, account compromise, and configuration drift with hundreds of pre-built detection controls. Respond automatically with your existing tools.

Dynamic SaaS security closes the SaaS security gap

Secure SaaS at every stage of its lifecycle.

Hundreds of apps supported. With new ones added every week.

Reco integrates with 175+ apps

Trusted by industry leaders

Of all competitors in the space, we like Reco the best. The information is easily digestible, very direct. It's not overloading the screen with information. This is the ideal SaaS security solution that any organization can easily pick up and get immediate time to value.

Kyle Kurdziolek
VP of Security

Reco has not only helped us protect our business, but has also produced financial ROI by discovering redundant accounts and allowing us to consolidate licensing. We discovered we had nine separate Smartsheet accounts. By canceling eight of them, migrating users into one account, and taking advantage of pricing discounts we were able to save \$200K. That freed up budget we could put toward security tools like Reco, and more importantly towards patient care.

Mike D'Arezzo
Executive Director of Security

What you get with Reco on your side.

New app? Supported

Get support for new apps in days, not quarters.

Everything SaaS security covered

Secure the entire lifecycle of your SaaS apps, cradle to grave.

Eureka-grade context

Get all the intel you need to squash security threats — fast.

Reco integrates with existing workflows established in SIEM and SOAR solutions
